Unit_Testing

June 26, 2020

0.1 Unit Testing

While we will not cover the unit testing library that python has, we wanted to introduce you to a simple way that you can test your code.

Unit testing is important because it the only way you can be sure that your code is do what you think it is doing.

Remember, just because ther are no errors does not mean your code is correct.

```
In [1]: import numpy as np
        import pandas as pd
        import matplotlib as plt
        pd.set_option('display.max_columns', 100) # Show all columns when looking at dataframe
In [2]: # Download NHANES 2015-2016 data
        df = pd.read_csv("nhanes_2015_2016.csv")
        df.index = range(1,df.shape[0]+1)
In [3]: df.head()
Out[3]:
             SEQN
                   ALQ101
                            ALQ110
                                    ALQ130
                                             SMQ020

0.1.1 Goal

We want to find the mean of first 100 rows of 'BPXSY1' when 'RIDAGEYR' > 60

```
In [4]: # One possible way of doing this is:
        pd.Series.mean(df[df.RIDAGEYR > 60].loc[range(0,100), 'BPXSY1'])
        # Current version of python will include this warning, older versions will not
Out[4]: 139.57142857142858
In [5]: # test our code on only ten rows so we can easily check
        test = pd.DataFrame({'col1': np.repeat([3,1],5), 'col2': range(3,13)}, index=range(1,1
        test
Out[5]:
            col1 col2
